
Sustainability Policy

The ambition for White Arkitekter is to be the leader in sustainable architecture, design and urban planning. Our approach is to be explorative and act responsibly through active engagement with the community. We inspire with emotive architecture, and sustainability is a driver for creativity in all our projects.

For us, sustainable architecture requires a holistic approach and a long-term perspective; creating desirable places with people at their focus, improving quality of life and wellbeing. Our designs sustain resilient ecosystems, conserving natural resources, energy and water to reduce climate change. By promoting sustainable investments, we can create long-term values for current and future generations. Our commitment is aligned to UN Sustainable Development Goals and our Code of Conduct is based on the UN Global Compact's 10 principles on human rights, labour, environment and anti-corruption. We take on

societal challenges and inspire end-users, customers and partners to reach sustainable solutions that exceed expectations and legal requirements. By continuously honing our expertise, improving our performance and driving the sustainability agenda, in projects as well as in our operation, we aspire to set benchmarks for the development of a more sustainable society.
